

DISTRIBUTOR

LED WALL SIGNAL DISTRIBUTOR

Description: 8-channel signal distributor is a must-have tool for any large scale led display installation. It allows 2 separate control channels to be distributed into 4 outputs each, or 1 channel into 9 outputs, making it easy to create redundant loops or drive multiple screens at different locations, therefore reducing the number of controllers needed. Doing so eliminates the need to split the DVI signal into multiple devices, avoiding the losses of quality at a critical point in the signal flow.
